The spectrum of aspergillosis

David W. Denning University Hospital of South Manchester The University of Manchester Myconostica Ltd

CLASSIFICATION OF ASPERGILLOSIS

Persistence without disease - colonisation of the airways or nose/sinuses Invasive aspergillosis

- Acute (<1 month course)
- Subacute/chronic necrotising (1-3 months)

Chronic aspergillosis (>3 months)

- Chronic cavitary pulmonary
- Aspergilloma of lung
- Chronic fibrosing pulmonary
- Chronic invasive sinusitis
- Maxillary (sinus) aspergilloma

<u>Allergic</u>

- Allergic bronchopulmonary (ABPA)
 - Extrinsic allergic (broncho)alveolitis (EAA)
 - Asthma with fungal sensitisation
 - Allergic Aspergillus sinusitis (eosinophilic fungal rhinosinusitis)

Where in the hospital does invasive aspergillosis occur?

MANCHESTER

Cornillet et al, Clin Infect Dis 2006;43:577

Risk factors for invasive aspergillosis

<u>Major</u>

- Neutropenia (+ monocytopenia)
- Corticosteroid treatment

<u>Minor</u>

- CD4penia
- Inherited immunodeficiency (ie CGD)
- Lung or sinus damage/disease
- Severe liver disease
- Exposure to high inocula

Risk factors for invasive aspergillosis in ICU

Table 2. Risk of invasive aspergillosis among patients admitted to the intensive care unit (ICU; medical, mixed or surgical).

High-risk category

Neutropenia (neutrophil count, <500 neutrophils/mm³)

Hematological malignancy

Allogeneic bone marrow transplantation

Intermediate-risk category

Prolonged treatment with corticosteroids before admission to the ICU

Autologous bone marrow transplantation

Chronic obstructive pulmonary disease

Liver cirrhosis with a duration of stay in the ICU >7 days

Solid-organ cancer

HIV infection

Lung transplantation

Systemic diseases requiring immunosuppressive therapy

Low-risk category

Severe burns

Other solid-organ transplant recipients (e.g., heart, kidney, or liver transplant recipients)

Steroid treatment with a duration of ≤7 days

Prolonged stay in the ICU (>21 days)

Malnutrition

Post-cardiac surgery status

Meersseman, Clin Infect Dis 2007;45:205

Invasive aspergillosis in ICU

MANCHESTER

Vandewoude et al, Critical Care 2006;10:R31.

Radiology completely unhelpful in suspecting the diagnosis

Meersseman, Clin Infect Dis 2007;45:205

Airways aspergillosis - spectrum

MANCHESTER 1824 www.aspergillus.org.uk

CLASSIFICATION OF ASPERGILLOSIS

Airways/nasal exposure to airborne Aspergillus

Persistence without disease - colonisation of the airways or nose/sinuses Invasive aspergillosis

- Acute (<1 month course)
- Subacute/chronic necrotising (1-3 months)

Chronic aspergillosis (>3 months)

- Chronic cavitary pulmonary
- Aspergilloma of lung
- Chronic fibrosing pulmonary
- Chronic invasive sinusitis
- Maxillary (sinus) aspergilloma

<u>Allergic</u>

- Allergic bronchopulmonary (ABPA)
 - Extrinsic allergic (broncho)alveolitis (EAA)
 - Asthma with fungal sensitisation
 - Allergic Aspergillus sinusitis (eosinophilic fungal rhinosinusitis)

Chronic pulmonary aspergillosis

Chronic cavitary pulmonary aspergillosis complicating ABPA

Chronic cavitary pulmonary aspergillosis with bilateral aspergillomas complicating sarcoidosis

'<u>Multicavity</u>' disease is the hallmark of chronic cavitary pulmonary aspergillosis (CCPA)

MANCHESTER

+ Aspergillus IgG antibodies (precipitins)

+ symptoms

Underlying diseases in patients with CPA (%)

| | <u>Smith</u> |
|----------------------------|--------------|
| Classical tuberculosis | 17 |
| Atypical tuberculosis | 16 |
| ABPA | 14 |
| COPD/emphysema | 33 |
| Pneumothorax | 17 |
| Lung cancer survivor | 10 |
| Pneumonia | 22 |
| Sarcoidosis (stage II/III) | 7 |
| Thoracic surgery | 14 |
| Rheumatoid arthritis | 4 |
| Asthma / SAFS | 12 |
| Ankylosing spondylitis | 4 |
| None | 1 |

Frequency of chronic pulmonary aspergillosis after TB

Anonymous. Tubercle 1970;51:227; Sonnenberg et al, Lancet 2001;358:1687

CLASSIFICATION OF ASPERGILLOSIS

Airways/nasal exposure to airborne Aspergillus

Persistence without disease - colonisation of the airways or nose/sinuses Invasive aspergillosis

- Acute (<1 month course)
- Subacute/chronic necrotising (1-3 months)

Chronic aspergillosis (>3 months)

- Chronic cavitary pulmonary
- Aspergilloma of lung
- Chronic fibrosing pulmonary
- Chronic invasive sinusitis
- Maxillary (sinus) aspergilloma

<u>Allergic</u>

- Allergic bronchopulmonary (ABPA)
 - Extrinsic allergic (broncho)alveolitis (EAA)
 - Asthma with fungal sensitisation
 - Allergic Aspergillus sinusitis (eosinophilic fungal rhinosinusitis)

MANCHESTER 1824

ABPA and severe asthma

www.emphysema-copd.co.uk

Global ABPA cases per WHO region related to adult asthma (mean 2.1%)

Europe Americas Eastern Medit. Africa Western Pacific SE Asia TOTALS

MANCHESTER

<u>Burden</u> 466,891 704,926 187,963 294,058 881,860 <u>614,353</u> 3,150,062

ABPA - Diagnostic clues

- Asthma/CF not well controlled
- History of 'pneumonia'
- History of coughing up plugs, or paroxysms of coughing that clear when chest clears
- Central bronchiectasis on CT scan, or mucoid impaction
- Eosinophilia

Rare cases in non-asthmatics, non-CF patients

ABPA - bronchoscopy views showing mucous plugging

CF and Aspergillus colonisation or infection

Amin, Chest 2010;137:171

MANCHESTER

O'Driscoll et al, BMC Pulmonary Medicine 2005;5:4

Severe asthma and fungal sensitisation (SAFS)

Criteria for diagnosis

- Severe asthma (BTS step 4 or 5) AND
- RAST (IgE) positive for any fungus
 OR
- Skin prick test positive for any fungus AND
- Exclude ABPA (ie total IgE <1,000 iu/mL)

Comparison of ABPA and SAFS serology

| 4 | <u>ABPA results</u> | | normal range | date 1 | date 2 |
|---------------------|----------------------------|---------------------|------------------------|----------------|----------------|
| Patien [.] | t | | | | |
| 1 | Total IgE aspergillus.f | KIU/l KUa/l | (0.1-100.0) (0-0.4) | 1900.0 41.6 | 3000.0 49.2 |
| | | | | | |
| - | SAFS results | | | | |
| 2 | Total IgE | KIU/l | (0.1-100.0) | 200.0 | 260.0 |
| | aspergillus.f | aspergillus.i KUa/l | (0-0.4) | 4.5 | 5.2 |

MANCHESTER 1824

O'Driscoll et al, Clin Exp Allergy 2009;39:1677

Fungal sensitisation in severe asthma skin prick test or RAST

Aspergillus Candida Penicillium Cladosporium Alternaria Botrytis

Fungal sensitisation in severe asthma number sensitised to one or more fungi

MANCHESTER 1824

O'Driscoll et al, Clin Exp Allergy. 2009;39:1677

Asthma and Aspergillus

79 adult asthmatics and 14 controls

Patients sensitised to *A. fumigatus* compared with nonsensitised asthmatics had: lower lung function (% pred. FEV1 68% vs 88% p < 0.05), more bronchiectasis (68% versus 35% p < 0.05) and more sputum neutrophils (80.9% vs 49.5% p < 0.01).

Fairs et al, Am J Respir Crit Care Med 2010; July 16

Randomised studies of antifungals and ABPA and/or asthma

| Disease | Antifungal, duration | Benefit? | Author, year |
|-----------------------|-----------------------|----------|---------------|
| ABPA | Natamycin inh, 52 wks | No | Currie, 1990 |
| ABPA | Itraconazole, 32 wks | Yes | Stevens, 2000 |
| ABPA | Itraconazole, 16 wks | Yes | Wark, 2003 |
| "Trichophyton" asthma | Fluconazole, 20 wks | Yes | Ward, 1999 |
| SAFS | Itraconazole, 32 wks | Yes | Denning, 2009 |

Interaction of *Aspergillus* with the host A unique microbial-host interaction
